SCENARIO FOR 1981 CENSUS PRODUCTS

GOVT PUBNS

CA1

BS105

-81512

This document presents a preliminary scenario for 1981 Census products. It will be subject to change based on user preference for alternatives, on new technological developments in printing, on limitations on Census resources, and other considerations. The scenario is being presented now, in order to inform users of the present plans for 1981 Census products, and encourage their participation in the further development of these plans.

The following policy guidelines are reflected in the proposed output scenario:

1. Cost-recovery for outputs will be increased in order to maximize revenue from the 1981 Census;
2. Costs of production will be reduced as much as possible (within the constraints imposed by 1. above);
3. Timeliness of production of 1981 Census outputs, once the retrieval data bases are available, must be improved.

In order to meet these three objectives, an operational strategy quite different from either 1971 or 1976 is herein proposed. Cost-recovery will be achieved through increased costs of census products and services, through limited distribution of tape outputs (to prevent their use outside Statistics Canada in the production of hard copy data for secondary distribution), and through more presentation of data in forms which have had a proven market in the past.

The costs of production will be reduced by employing new technological developments in printing hardware, and by exploiting computer printouts, microform and summary tapes for presentation of census data. The use of new technology and the shifting of census outputs from regular catalogued publications to computer printouts, microform and summary tapes should also improve the timeliness of production of many census outputs.

The 1981 Census products will consist of the following:

1. The 1981 Census Retrieval Data Base

Subject to confidentiality constraints, the ability of users to pay and the availability of resources, Statistics Canada will undertake to produce specialized, ad hoc tabulations on a cost recovery basis. Output may be in the form of tables or computer graphics. The capability will also be available to produce pre-planned tables for special districts such as school board areas, health districts, etc., where user demand warrants such an approach.

2. The 1981 Data Series (See Tables 1, 2 and 3)*

The output media for the 1981 Data Series will be in three forms: print, microform and tape.

* Note that the level of detail for tabulations shown in tables 1, 2 and 3 is meant to serve as a guideline indicating the maximum level of detail which is likely to be available. This does not preclude the possibility of producing tables in less detail than shown here. Similarly, there may be some instances where more detailed tables are produced.

2.1 Print outputs will consist of the regular publications, which, as in the past, will be available in the public domain, and unpublished computer printouts which will be produced for specialized users. Higher prices will be charged for the latter outputs in order to attempt to meet cost recovery objectives.

The catalogued publications may be produced either manually, by using photocomposition, or by page-printing devices. The scope of the regular publication program (in terms of geographic coverage) will be reduced from that of the 1976 Census.

The production of unpublished computer printouts will be expanded in 1981. Pre-planned packages will be produced where it is anticipated that the level of sales does not justify a regular publication, or where users want combinations of geography and variables not provided in the regular program (e.g., data on age, sex and mother tongue for a specified number of enumeration areas in Montréal CMA). It should be pointed out, however that data in this format are sometimes more difficult to use, because of limited facility for stub - text indentation, row and column lines and other visual aids to table interpretation.

2.2 Microform, will be comprised primarily of fiche which will replicate the data series available in print and on tape. Prices between the media will be competitive.

2.3 Tape will be comprised of summary tapes showing census counts and characteristics. Primary distribution will be restricted to federal government departments and the provincial statistical agencies. Again, the copying of tapes and secondary distribution will be prohibited. Sample tapes, such as the 1971 Census Public Use Sample Tapes, will be produced only on a full cost recovery basis.

The proposed media mix by geographic area and level of detail is shown in Tables 1, 2 and 3. It should be noted that the regular publications may not contain definitions and data quality measures. In order to reduce costs, and improve timeliness, these components of the output program may be removed from the data series and made available in the reference series. This could avoid the repetition of the same definitions in numerous different publications. The data series could, therefore, be essentially a tabular series, supported only by the most essential cautionary or explanatory notes.

Further attempts to control costs will be achieved through the production of selected geographic levels in the form of computer printouts rather than regular publications.

3. The 1981 Reference Series (See Table 4)

The Reference Series is comprised of the general reference products and the geographic reference products. The range of these products is seen in Table 4.

The Catalogue will provide a comprehensive listing of all pre-planned tabulations, publications, products and services available from the 1981 Census.

The Dictionary, which is to contain definitions of the census variables, could be a key reference document in the general series since definitions may not be incorporated in any of the Data Series outputs. The Summary Guide will replace the publications which appeared as introductory reports in previous censuses. It will contain notes on methodology, procedures, data quality, standard error tables, etc., and will contain an index of the tabular material. A bulletin (or series of bulletins) will present findings on the impact of coverage, sampling, and processing errors on the quality of 1981 Census data.

The geographic reference products will provide information to enable or facilitate the interpretation and analysis of 1981 Census results and data from earlier censuses. A description of the general reference products and geographic reference products appears in Appendix 1.

The 1981 Descriptive Series (See Table 5)

The objectives of this series are to capitalize on a proven market for a rudimentary descriptive series and to generate interest in other census products. The descriptive series will consist of "content" publications and "area" publications.

The content series will be of a level of analysis similar to the 1976 Census Descriptive Series (e.g., Canada's Elderly), with tabular presentations, simplified graphics and an accompanying text. Description of trends and characteristics will be at the Canada and Province level, but thematic maps included may be more detailed.

The area series will cover a specified number of major CMAs with a minimum of textual analysis, but highlighting thematic maps and graphics (again simplified to reduce costs).

Preliminary topics for these series are shown in Table 5. Within the framework of the existing budget, current plans do not include in-depth analytical work.

The 1981 Official Release Series

This is a series of products or outputs designed primarily to either meet policy requirements on data release, to announce the release of products or to promote the use of census data.

5.1 Statistics Canada Daily

5.1.1 Data availability - statements will appear in the Daily announcing the availability of data, pursuant to their approval for release. This will include a brief narrative discussing the data at the Canada and Province level and showing historical changes where applicable.

5.1.2 Product availability - as each product or service is available, it will be announced with a brief descriptive statement in the Daily.

5.2 Infomat

Announcements concerning the availability of data and other census products will continue to be made in Infomat.

5.3 Press Releases

These are to cover those universes and variables that may be considered newsworthy. Usually, these should be regional in nature and, where possible, should be geared to particular media since, for example, a Toronto TV station may have a different coverage area than Toronto radio stations or major newspapers.

Generally, however, most releases will be aimed at regions, provinces or metropolitan areas.

NOTE: The fourth component of the Official Release Series - Preliminary Population Counts, has now been cancelled.

(1) BASIC GENERALLY REFERS TO TABULATIONS WHICH ARE NOT CROSS-CLASSIFIED. HIGHLY DETAILED BASIC REFERS TO SUCH TABLES AS AGE BY SINGLE YEARS, AND HOUSEHOLDS BY DETAILED HOUSEHOLD TYPE. IT ALSO INCLUDES FUNDAMENTAL CROSS-TABULATIONS E.G., AGE BY SEX. SEE APPENDIX 2 FOR EXAMPLES.

DETAILED BASIC REFERS TO TABLES, SUCH AS AGE BY FIVE YEAR AGE GROUPS, WHICH ARE SOMEWHAT LESS DETAILED THAN THE "HIGHLY DETAILED" TABLES. SEE APPENDIX 2 FOR EXAMPLE.

COLLAPSED BASIC REFERS TO FUNDAMENTAL TABLES SUCH AS AGE BY TEN YEAR AGE GROUPS. SEE APPENDIX 2 FOR EXAMPLE.

EXAMPLES OF DETAILED CROSS-CLASSIFIED, COLLAPSED CROSS-CLASSIFIED AND CENSUS TRACT TABLES ARE FOUND IN APPENDIX 2.

(2) POPULATION COUNT TABLES SHOW ONLY THE POPULATION COUNTS FOR THE GEOGRAPHIC AREAS SHOWN. CENSUS CHARACTERISTICS DO NOT APPEAR IN THESE TABLES. THE POPULATION COUNT TABLES ARE AVAILABLE CONSIDERABLY EARLIER THAN THE OTHER OUTPUTS.

(3) UNPUBLISHED PRINT OUTPUTS FOR SALE ON REQUEST.

NOTE: THE GEOGRAPHIC AREAS REFERRED TO IN THIS TABLE ARE DEFINED IN APPENDIX 3.

APPENDIX 1

Definition of Reference Series

A. General Reference Products

1. Catalogue

This will provide a comprehensive listing of all pre-planned tabulations, publications, products and services available from the 1981 Census. It may be updated from time to time.

2. Dictionary

This will be similar to the Dictionary of the 1971 Census Terms. It may replace the definitions that formerly appeared in the data bulletins. This approach may result in cost savings and an improved timeliness of release of the data series.

3. Summary Guide

The Summary Guide will contain information provided in the Introductory Reports of previous censuses. Notes on methodology, data quality, tables of standard error, as well as an index of tables will be included. This change is made in order to reduce costs.

4. Procedural History

This includes more detailed notes on methodology as well as providing reproductions of 1981 Census documents. Contents will be essentially the same as the Administrative Reports of earlier censuses.

5. Data Quality

This will include a series of reports on data quality as related to collection, sampling and weighting, edit and imputation, etc.

B. Geographic Reference Products

6. Reference Maps

Several series of maps identify and locate the boundaries of all census geostatistical areas (e.g., enumeration areas, census subdivisions, census metropolitan areas, census tracts). In addition to these series of maps, there also exists the traditional reference maps in the data series. One bulletin contains a series of maps that identify and locate the boundaries of Census Divisions, Census Subdivisions, Census Metropolitan Areas and Census Agglomerations. In addition, the map of Federal Electoral Districts, the map of Census Divisions and those maps of Census Tracts will be included in the relevant data bulletins.

7. Equivalent Enumeration Areas, 1981-1976

This document presents the relationship between 1981 and 1976 enumeration areas by federal electoral district and by province. Enumeration areas are listed in geographically equivalent groupings and serve to aid users in the comparison of small area data between 1981 and 1976.

8. Equivalent Enumeration Areas, 1981-1971

This document presents the relationship between 1981 and 1971 enumeration areas by federal electoral district and by province. Enumeration areas are listed in geographically equivalent groups and serve to aid users in the comparison of small area data between 1981 and 1971.

9. Place Name Reference List

Lists all Census Divisions, Census Subdivisions, and Unincorporated Places for which 1981 population is reported. Provides 1981 population counts and geographic reference (e.g., latitude and longitude, standard geographical code, National Topographic System map identification). This document serves to aid users in formulating special requests.

10. Street Indexes

A street index links street data (e.g., street name, type, direction and odd and even address ranges) to geographic data (e.g., municipality, federal electoral district, enumeration area and census tract). Street indexes cover urban centres having a population of 50,000 or more.

11. Census Subdivisions in Decreasing Population Order

This document provides 1981 population counts for all census subdivisions in Canada in decreasing population order. A second table provides 1981 population counts for all census subdivisions in alphabetical order. In both tables national rank order is also indicated.

12. Population and Household Counts for Enumeration Areas by Federal Electoral District and Province

A listing of all census enumeration areas, by federal electoral district and by province, presenting the population and household counts. This document is produced from the Census Geographic Master File, primarily for internal operational purposes but will be available to census users as part of the geographic reference series.

13. Enumeration Area Reference Lists

This is a series of lists establishing the linkages between the basic unit of census data collection, the enumeration area, and the various standard geographic areas of data presentation i.e. census geostatistical areas. Linkages amongst these census geostatistical areas are also presented. These lists serve as an aid to access census data compiled on standard geostatistical areas, to order reference maps of these areas, or to create areas of special interest for which census data are required.

14. Census Division Land Area and Population File

This tape file, generated from the Census Geographic Master File, provides the population and land area of 1981 Census Divisions.

15. Census Subdivision Land Area and Population File

This tape file, generated from the Census Geographic Master File, provides the population and land area of 1981 Census Subdivisions.

16. Census Tract Land Area and Population File

This tape file, generated from the Census Geographic Master File, provides the population and land area of 1981 Census Tracts.

17. 1981 Geography Tape File

This file assigns each enumeration area to all higher geographic levels by code and name. It includes standard geographic codes, land area, population and household counts. It is used primarily by certain users of machine-readable data.

18. Area Master File

Area Master Files contain a logical representation of all city streets plus some other features (such as railroad tracks, rivers and municipal boundaries) in machine-readable form. An AMF geographically references every street, address range,

block-face and centroid coordinate in the coverage area. AMFs are used as the geographic base for which census data can be retrieved by standard census geostatistical areas or by user-specified areas.

19. Enumeration Area Geography File

This file is the geographic support of the 1981 User Summary Tape programmes at the EA level.

20. Census Tract/Provincial Census Tract Geography File

This file is the geographic support of the 1981 User Summary Tape programmes at the CT/PCT level.

21. Census Subdivision Geography File

This file is the geographic support of the 1981 User Summary Tape programmes at the CSD level.

22. Final Population Counts for Census Tracts, 1976 and 1981

A document for each of the 36 tracted centres (together or separately) providing the 1981 population counts, 1976 population counts (based on the 1981 area) and percentage population change 1976-1981 for all census tracts. Also included are reference maps showing the boundaries of 1981 census tracts.

23. Final Population Counts for Components, Census Metropolitan
Areas and Census Agglomerations, 1976 and 1981

This document provides 1981 population counts, 1976 population counts (based on the 1981 area) and percentage population change 1976-1981 for census metropolitan areas, census agglomerations and their component census subdivisions.

Appendix 2

TABLE 7. Households by Type, for Canada and Provinces, 1971

TABLÉAU 7. Ménages selon le genre, Canada et provinces, 1971

Type of household — Genre de ménage	Canada	New- foundland — Terre- Neuve	Prince Edward Island — Île-du- Prince- Édouard	Nova Scotia — Nouvelle- Écosse
All households — Tous les ménages	6,041,305	110,475	27,895	208,420
Family households — Ménages familiaux	4,933,450	101,105	23,290	173,970
One-family households — Ménages unifamiliaux	4,812,360	94,480	22,410	167,765
Family of household head — Famille du chef de ménage	4,773,900	93,145	22,140	165,295
Both parents at home — Le père et la mère à la maison ...	4,365,510	85,845	20,180	150,285
Without additional persons — Sans autres personnes	3,961,730	73,800	17,730	133,090
With additional persons — Avec d'autres personnes	403,785	12,050	2,450	17,200
Related to head — Apparentées au chef	257,245	7,905	1,585	11,275
Not related to head — Non apparentées au chef	131,560	3,625	755	5,160
Both related and not related — Apparentées et non apparentées au chef	14,975	515	110	770
One parent only at home — Le père ou la mère seulement à la maison	408,385	7,295	1,965	15,005
Without additional persons — Sans autres personnes	324,230	5,690	1,500	11,360
With additional persons — Avec d'autres personnes	84,150	1,605	460	3,645
Related to head — Apparentées au chef	37,495	900	250	1,710
Not related to head — Non apparentées au chef	41,755	630	195	1,695
Both related and not related — Apparentées et non apparentées au chef	4,900	80	20	235
Family other than that of household head — Famille autre que celle du chef de ménage	38,465	1,335	275	2,475
Related to head — Apparentée au chef	26,845	1,140	235	1,980
Both parents at home — Le père et la mère à la maison ...	18,450	930	180	1,445
One parent only at home — Le père ou la mère seulement à la maison	8,395	215	55	535
Not related to head — Non apparentée au chef	11,620	195	35	490
Both parents at home — Le père et la mère à la maison ...	10,705	190	30	435
One parent only at home — Le père ou la mère seulement à la maison	920	5	5	55
Two-or-more family households — Ménages multifamiliaux	121,085	6,620	880	6,205
Including family of household head — Y compris la famille du chef de ménage	119,995	6,575	870	6,140
With no family of household head — Sans la famille du chef de ménage	1,085	50	10	65
Non-family households — Ménages non familiaux	1,107,855	9,375	4,605	34,450
One person only — Une personne seulement	811,835	6,490	3,200	23,820
Two or more persons — Deux personnes ou plus	296,020	2,880	1,400	10,630
Related to head — Apparentées au chef	119,050	1,635	795	5,060
Not related to head — Non apparentées au chef	165,605	1,125	535	5,070
Both related and not related — Apparentées et non apparen- tées au chef	11,365	120	80	500

(1) Includes Lawrence Pond L.I.D. (1971 - No population; 1966 - 11).

APPENDIX 3

1. Geographic Levels

Census Agglomeration (CA)

The main labour market area of an urbanized core (or continuously built-up area) having between 10,000 and 100,000 population. CAs are created by Statistics Canada and are usually known by the name of the urban area forming their urbanized core. They contain whole municipalities (or census subdivisions). CAs are comprised of (1) municipalities completely or partly inside the urbanized core, and (2) other municipalities, if (a) at least 40% of the employed labour force living in the municipality works in the urbanized core, or (b) at least 25% of the employed labour force working in the municipality lives in the urbanized core.

Census Division (CD)

General term applying to counties, regional districts, regional municipalities, etc. In Newfoundland, Manitoba, Saskatchewan and Alberta, the term describes geostatistical areas that have been created by Statistics Canada in co-operation with the provinces as an equivalent for counties.

Census Metropolitan Area (CMA)

The main labour market area of an urbanized core (or continuously built-up area) having 100,000 or more population. CMAs are created by Statistics Canada and are usually known by the name of the urban area forming their urbanized core. They contain whole municipalities (or census subdivisions). CMAs are comprised of (1) municipalities completely or partly inside the urbanized core, and (2) other municipalities, if (a) at least 40% of the employed labour force living in the municipality works in the urbanized core, or (b) at least 25% of the employed labour force working in the municipality lives in the urbanized core.

CMA/CA Part

Census metropolitan areas (CMAs) and census agglomerations (CAs) are divided into three parts: urbanized core, urban fringe and rural fringe. The parts are always made up of complete enumeration areas, but often comprise only parts of municipalities (or census subdivisions). Not all three parts will necessarily be found in each CMA or CA.

Urbanized core: Continuous built-up area around which a CMA or a CA is delineated. To be considered as continuous, the built-up area must not have a discontinuity exceeding two kilometres. Usually its name is used as the name of the CMA or CA.

Fringe: Part of a CMA or a CA outside the urbanized core. The fringe consists of urban parts and rural parts.

Census Subdivision (CSD)

General term applying to municipalities, Indian Reserves, unorganized territories and subdivisions. In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the provinces as an equivalent for municipalities. The 1981 Census will be taken on the municipal boundaries as of January 1, 1981.

Census Tract (CT)

Permanent small census geostatistical area established in large urban communities with the help of local specialists interested in urban and social science research. Census tracts are reviewed and approved by Statistics Canada according to the following criteria:

- (a) the boundaries must follow permanent and easily recognized lines on the ground;
- (b) the population must be between 2,500 and 8,000 with a preferred average of 4,000 persons, except for census tracts in the central business district, major industrial zones, or in peripheral rural or urban areas that may have either a lower or higher population;
- (c) the area must be as homogeneous as possible in terms of economic status and social living conditions; and
- (d) the shape must be as compact as possible.

All census metropolitan areas, all census agglomerations with a city having a population of 50,000 or more, and all other cities of at least 50,000 population at the previous census are eligible for a census tract programme.

Component

The municipality or census subdivision building-block of a census metropolitan area or a census agglomeration.

Federal Electoral District (FED)

Any territorial unit entitled to return a member to serve in the House of Commons. There are 282 FEDs in Canada based on the 1976 representation Order. These FEDs are used both to present data and organize census-taking.

Provincial Census Tract (PCT)

Permanent small census geostatistical areas of rural and/or urban type. PCTs exist in the area not included in the census tract programme. Populations of PCTs generally vary between 3,000 and 8,000 with a preferred average of 5,000. Boundaries, as much as possible, follow permanent physical features and/or geographic units suggested by the provinces.

Urban Area

An area having a population concentration of 1,000 or more and a population density of 400 or more per square kilometre.

Urban Population Size Group

Classification used in tabulations where the urban areas are distributed according to the following size groups:

1,000	-	2,499
2,500	-	4,999
5,000	-	9,999
10,000	-	29,999
30,000	-	99,999
100,000	-	499,999
500,000	and over
